This machine has the potential to be extremely dangerous - in the wrong hands it can kill or maim; It is therefore imperative that both owner and operator of the machine reads and understands the following section to ensure they are fully aware of the dangers that do, or may exist, and their responsibilities surrounding the use and operation of the machine.

The operator of this machine is responsible not only for their own safety but equally for the safety of others who may come into the close proximity of the machine, as the owner you are responsible for both.

When the machine is not in use the cutting head should be lowered to rest on the ground. In the event of any fault being detected with the machine’s operation it must be stopped immediately and not used again until the fault has been corrected by a qualified technician.

POTENTIAL SIGNIFICANT DANGERS ASSOCIATED WITH THE USE OF THIS MACHINE:

▲ Being hit by debris thrown by rotating components.
▲ Being hit by machine parts ejected through damage during use.
▲ Being caught on a rotating power take-off (PTO) shaft.
▲ Being caught in other moving parts i.e.: belts, pulleys and cutting heads.
▲ Electrocution from Overhead Power Lines (by contact with or ‘flashover’ from).
▲ Being hit by cutting heads or machine arms as they move.
▲ Becoming trapped between tractor and machine when hitching or unhitching.
▲ Tractor overbalancing when machine arm is extended.
▲ Injection of high-pressure oil from hydraulic hoses or couplings.
▲ Machine overbalancing when freestanding (out of use).
▲ Road traffic accidents due to collision or debris on the road.
BEFORE USING THIS MACHINE YOU MUST:

▲ Ensure you read all sections of the operator handbook.
▲ Ensure the operator is, or has been, properly trained to use the machine.
▲ Ensure the operator has been issued with and reads the operator handbook.
▲ Ensure the operator understands and follows the instructions in operator handbook.
▲ Ensure the tractor front, rear and sides are fitted with metal mesh or polycarbonate guards of suitable size and strength to protect the operator against thrown debris or parts.
▲ Ensure tractor guards are fitted correctly, are undamaged and kept properly maintained.
▲ Ensure that all machine guards are in position, are undamaged, and are kept maintained in accordance with the manufacturer’s recommendations.
▲ Ensure flails and their fixings are of a type recommended by the manufacturer, are securely attached and that none are missing or damaged.
▲ Ensure hydraulic pipes are carefully and correctly routed to avoid damage by chaffing, stretching or pinching and that they are held in place with the correct fittings.
▲ Always follow the manufacturer’s instructions for attachment and removal of the machine from the tractor.
▲ Check that the machine fittings and couplings are in good condition.
▲ Ensure the tractor meets the minimum weight recommendations of the machine’s manufacturer and that ballast is used as necessary.
▲ Always inspect the work area thoroughly before starting to note obstacles and remove wire, bottles, cans and other debris.
▲ Use clear suitably sized warning signs to alert others to the nature of the machine working within that area. Signs should be placed at both ends of the work site. (It is recommended that signs used are of a size and type specified by the Department of Transport and positioned in accordance with their, and the Local Highways Authority, guidelines).
▲ Ensure the operator is protected from noise. Ear defenders should be worn and tractor cab doors and windows must be kept closed. Machine controls should be routed through proprietary openings in the cab to enable all windows to be shut fully.
▲ Always work at a safe speed taking account of the conditions i.e.: terrain, highway proximity and obstacles around and above the machine. Extra special attention should be applied to Overhead Power Lines. Some of our machines are capable of reach in excess of 8 metres (26 feet) this means they have the potential to well exceed, by possibly 3 metres (9’ 9”), the lowest legal minimum height of 5.2 metres from the ground for 11,000 and 33,000 volt power lines. It cannot be stressed enough the dangers that surround this capability, it is therefore vital that the operator is fully aware of the maximum height and reach of the machine, and that they are fully conversant with all aspects regarding the safe minimum distances that apply when working with machines in close proximity to Power Lines. (Further information on this subject can be obtained from the Health & Safety Executive or your Local Power Company).
Always disengage the machine, kill the tractor engine, remove and pocket the key before dismounting for any reason.

Always clear up all debris left at the work area, it may cause hazard to others.

Always ensure when you remove your machine from the tractor that it is left in a safe and stable position using the stands and props provided and secured if necessary.

WHEN NOT TO USE THIS MACHINE:

Never attempt to use this machine if you have not been trained to do so.

Never use a machine until you have read and understood the operator handbook, are familiar with it, and practiced the controls.

Never use a machine that is poorly maintained.

Never use a machine if guards are missing or damaged.

Never use a machine on which the hydraulic system shows signs of wear or damage.

Never fit, or use, a machine on a tractor that does not meet the manufacturer’s minimum specification level.

Never use a machine fitted to a tractor that does not have suitable front, rear and side(s) cab guarding made of metal mesh or polycarbonate.

Never use the machine if the tractor cab guarding is damaged, deteriorating or badly fitted.

Never turn a machine cutting head to an angle that causes debris to be ejected towards the cab.

Never start or continue to work a machine if people are nearby or approaching - Stop and wait until they are at a safe distance before continuing. WARNING: Some cutting heads may continue to ‘freewheel’ for up to 40 seconds after being stopped.

Never attempt to use a machine on materials in excess of its capability.

Never use a machine to perform a task it has not been designed to do.

Never operate the tractor or machine controls from any position other than from the driving seat, especially whilst hitching or unhitching the machine.

Never carry out maintenance of a machine or a tractor whilst the engine is running – the engine should be switched off, the key removed and pocketed.

Never leave a machine unattended in a raised position – it should be lowered to the ground in a safe position on a level firm site.

Never leave a tractor with the key in or the engine running.

Never carry out maintenance on any part or component of a machine that is raised unless that part or component has been properly substantially braced or supported.

Never attempt to detect a hydraulic leak with your hand – use a piece of cardboard.

Never allow children near to, or play on, a tractor or machine under any circumstances.
ADDITIONAL SAFETY ADVICE

Training
Operators need to be competent and fully capable of operating this machine in a safe and efficient way prior to attempting to use it in any public place. We advise therefore that the prospective operator make use of relevant training courses available such as those run by the Agricultural Training Board, Agricultural Colleges, Dealers and McConnel.

Working in Public Places
When working in public places such as roadsides, consideration should be paid to others in the vicinity. Stop the machine immediately when pedestrians, cyclists and horse riders etc. pass. Restart only when they are at a distance that causes no risk to their safety.

Warning Signs
It is advisable that any working area be covered by suitable warning signs and statutory in public places. Signs should be highly visible and well placed in order to give clear advanced warning of the hazard. Contact the Department of Transport or your Local Highways Authority to obtain detailed information on this subject. The latter should be contacted prior to working on the public highway advising them of the time and location of the intended work asking what is required by way of signs and procedure. – ‘Non-authorised placement of road signs may create offences under the Highways Act’.

Suggested Warning Signs Required
‘Road works ahead’ warning sign with a supplementary ‘Hedge cutting’ plate. ‘For 1 mile’ or appropriate shorter distance may be added to the plate.

‘Road narrows’ warning signs with supplementary ‘Single file traffic’ plate.

White on blue ‘Keep right’ (*) arrow sign on rear of machine.

* Note – this applies to UK Market machines where traffic passes to the right of a machine working in the same direction as the traffic flow. The direction, use and colour of the arrow sign will depend on the country of use and the Local Highway Authorities regulations in the locality.

Use of Warning Signs
▲ On two-way roads one set of signs is needed facing traffic in each direction.
▲ Work should be within 1 mile of the signs.
▲ Work only when visibility is good and at times of low risk e.g.: NOT during ‘rush-hour’.
▲ Vehicles should have an amber-flashing beacon.
▲ Ideally, vehicles should be conspicuously coloured.
▲ Debris should be removed from the road and path as soon as practicable, and at regular intervals, wearing high visibility clothing and before removing the hazard warning signs.
▲ Collect all road signs promptly when the job is completed.

Although the information stated here covers a wide range of safety subjects it is impossible to predict every eventuality that can occur under differing circumstances whilst operating this machine. No advice given here can replace ‘good common sense’ and ‘total awareness’ at all times, but will go a long way towards the safe use of your McConnel machine.
PROPORTIONAL ARMREST CONTROLS - v.3

1. Right Hand
2. Left Hand
3. 6 or 4
4. or 6
5. 2
6. Left Hand

Diagram showing the proportional armrest controls with directions for left and right hand operations.
**SWITCH LOCATIONS - v.3 Proportional Armrest Controls**

<table>
<thead>
<tr>
<th>SWITCH</th>
<th>FUNCTION</th>
<th>L.E.D.</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Power ON/OFF - Turn clockwise for ON, Push for OFF</td>
<td>-</td>
</tr>
<tr>
<td>B</td>
<td>Auto Reset</td>
<td>b</td>
</tr>
<tr>
<td>C</td>
<td>Lift Float</td>
<td>c</td>
</tr>
<tr>
<td>D</td>
<td>Head Angle Float</td>
<td>d</td>

**Note:** The mode selection of H is retained in the circuit memory when powering off and on, it does not deselect when the unit is switched off.
### SWITCH FUNCTIONS - v.3 Proportional Armrest Controls

All auxiliary switch controls are accompanied by an L.E.D. light, these indicate to the operator that a function is selected and working correctly.

<table>
<thead>
<tr>
<th>SWITCH</th>
<th>FUNCTION/OPERATION</th>
</tr>
</thead>
</table>
| SWITCH ‘A’ | POWER ON/OFF  
*Turn clockwise for ‘ON’ and push down for ‘OFF’* |
| SWITCH ‘B’ | AUTO RESET  
*(L.E.D. light ‘b’)*  
*Press down to select ‘auto reset’ (i.e. normal working). Pressing either ‘Slew’ buttons will de-select ‘Auto Reset’ and allow ‘Slew’ operation. ‘Auto Reset’ will have to be reselected if required.* |
| SWITCHES ‘C’ | LIFT FLOAT  
*(L.E.D. light ‘c’)*  
*Press either switch to select or deselect the 'lift float' function.  
When ‘lift float’ is selected operating the lift service will override the float operation. On completion of the arm adjustment ‘lift float’ will automatically be reinstated.* |
| SWITCHES 'D' | HEAD ANGLE FLOAT  
*(L.E.D. light 'd')*  
*Press either switch to select or deselect the 'head angle float' function.  
When 'angle float' is selected operating the angle service will override the float operation. On completion of the head adjustment 'angle float' will be automatically reinstated.* |
| SWITCHES 'E', 'F' & 'G' | OPERATIONAL ON MACHINES WITH ELECTRIC ROTOR ON/OFF CONTROL ONLY |
| SWITCH 'E' | ROTOR OFF |
| SWITCH 'F' | ROTOR ON - UPWARD CUTTING  
*(L.E.D. light ‘f’)*  
*Press to select* |
| SWITCH 'G' | ROTOR ON - DOWNWARD CUTTING  
*(L.E.D. light ‘g’)*  
*Press to select* |
| REVERSING ROTATION: | TURN ROTOR OFF  
*WAIT until Rotor has STOPPED  
Select opposite rotation* |
| SWITCH 'H' | |  
*(L.E.D. light 'h’)*  
*Press switch ‘H’ to swap the operation controls of the Slew and Tele (red light appears). The Control box will remember this mode when the controls are turned off and will remain in the same mode when next switched on.* |
| SWITCHES 'I' & 'J' | SLEW & TELE or TELE & SLEW  
*dependent on mode of Switch ‘H’* |
SCREEN DISPLAY AND FUNCTIONS

Twist E/stop on armrest controls to power on and the screen will light up. Note: 12Volts at the battery are required for correct function.

1. The screen will initially display the McConnel logo, software version and the PTO maximum speed.

2. Pressing scroll forward once will display the running screen. The TOT displays the total time the rotor has been switched on. The JOB also displays the rotor on time but may be reset to zero by pressing the X button for 3 seconds.

3. Pressing either of the Rotor ON buttons will activate the ‘egg timer’ and rotor image.

4. Pressing the EDS Lift float button will turn on the EDS (EDS Lift Float machines only). Then SOFT, MED or HARD will be added to the running screen.

5. Pressing \( \sqrt{\text{ }} \) while the EDS is turned on will scroll through the SOFT, MED and HARD working settings.

6. Pressing scroll forward displays the actual Tractor PTO running speed

7. Scrolling forward again displays the Power Monitor screen.

Scrolling backwards will display the screens in the opposite order.
